Emerging Hope in a Chaotic World

The universe we live in is dynamic, creative, beautiful and chaotic. During this session, we will consider what the universe can reveal about God and how we can become continually more conscious of its potential for hope in the midst of the chaos. We will consider what part chaos plays in the transformation of our personal, social lives and in the transformation of the world.

Kathleen Duffy SSJ PhD

Kathleen Duffy SSJ is Professor Emerita of Physics at Chestnut Hill College, Director of the Institute for Religion and Science at Chestnut Hill College, President of the American Teilhard Association, and serves on the Board of Cosmos and Creation. She is associate editor of Teilhard Studies, a biannual publication of the American Teilhard Association. Her current research interest concerns the religious essays of Jesuit paleontologist Pierre Teilhard de Chardin and the relationship of his synthesis to modern developments in science.
